

CONSIDER

Consider [.com with .sidus star]

*  (think) is what I have been using.
 The idea was to consult the stars (as in astrology) when taking something under consideration, which is quaint + cute.

In my new id I have the light of thought shining on a table - something is on the table for consideration.

I don't know if I'll permanently replace  with .

 has its advantage as an etymid.

I'll see how  works for me in use, I'll consider it.
