

The functional presence of ideograms in the mind & psyche do, I have zero doubt, make one's ideation - one's ideas - stronger.

This has a positive effect not only for general theorizing + understanding but also for the practical conduct of life in so far as ideas are used to guide + monitor one's life. This includes in addition to terms having to do with personal psychology + character - like will, intention, mind, focus, effort, commitment, devotion, reason, etc. - important simple structural words like new, can, future, way, possible, necessary, etc.

warn ~~say~~ say future danger cliff
 or just speak dangerously
 Or I suppose this could mean "say dangerous things" but we don't have a Eng. word for that.
