

o + o
All and Nothing

Actually, I like \bullet better for "nothing", with a big black spot. Contrast to \circ "without" with a medium sized spot

\odot "All": a bounded area outside of which is nothing.

Things and classes of things can be bounded, but can the universe as a whole, all of existence, be?

(In German "das All" equals "the Universe".)

Maybe this all-inclusive sense of "all" would better be represented by something that shows unlimited expansiveness

(\uparrow ?)

Epistemologically, I'm good with just avoiding such considerations as in the realm of the unknowable + epistemologically invalid, like "infinity". (∞)

Notes \cup "like" or "I like" / Π better I'm trying out Leibniz's Π more (is greater than) + Π less. instead of \uparrow + \downarrow . I like his Π for "equal" but had already used Π for "government".

FA contrast [Latin contra sto] against stand

\boxplus I chose \boxplus , clear (= deutlich, sounds like "deutsch") for "Germany", the large box indicating a country. \boxdot language \boxtimes tongue.

\boxdot exist \boxtimes is Why in the little box, usually the position indicator?

I don't know, It seems to me to fit - I like it.

\boxdot inclusive \boxtimes in \boxtimes [clud closed] (\boxdot open) \boxtimes adj. indicator

\boxdot would \boxtimes will \boxtimes if (conditional indic. \boxdot \boxtimes could \boxdot would like)

\boxtimes infinity \boxdot fin end \boxtimes infinite. I don't really like ∞ , which shows travelling in a loop, but not distance.
