

about it and therefore never carry out these new actions and ideas. Until recently, remote viewing was top secret — now it has been made public. This new meme is available to the general public, so they may now learn remote viewing. The British establishment are terrified of this new turn of events, as the advent of psi enables people to have the power to find out any secrets, change things as they wish and alter reality.

Now that the remote viewing meme is public knowledge, the whole set of ideas of psi-warfare are now in the public domain. If we take the biophysical model of reality, which the author has postulated in preceding chapters, as a better model of what is occurring than the conventional mechanistic view, we arrive at an entirely new outlook on society and its nature.

In the author's model, memes are biophysical fields that are not localised to one particular physical body, but in fact can move around as independent entities. Viruses travel in a similar manner, but depend on the host to provide the raw materials to make new viruses by hijacking the cells of the infected organism. Memes travel through the mode of language and culture, in an analogous manner to the virus, which spreads via the air or by bodily liquids. When the meme is communicated to the human brain via language, culture or by the hundredth monkey effect (see page 86), infection with the meme is resisted, rather like a virus is resisted by the immune system. When the immune system fails, the virus is free to infect the host. (In the case of memes, the memes that are already in the person resist the new ones.)

religion
Science as the immune system of society that resists new memes

When learning remote viewing, this meme is resisted by the meme structure, the PDF. A meme structure is a set of memes that are self-consistent and give a description of reality that is at least partially able to fit the facts. The meme structure we live within is the set of notions that we all have a physical body, controlled by the brain, while reality is a purely mechanistic process perfectly defined by science. Remote viewing cannot

∇ + how to ∇ culture

possibly fit into this model of reality, since there is no meme structure to explain how psychic spying could occur. In this book, an explanation of how remote viewing works is described that does not require the scientific model to be discarded, but instead expanded. This means that the memes that comprise the PDF cannot resist the RV meme, which slips into the meme structure we all uphold. Science is the key factor in the immune system of our culture. If new phenomena can be fitted into the scientific model, then they are readily accepted into our culture. Examples of this could be flying, space travel — remote viewing...

Memes are even more vital to the whole of human society in that they are biophysical fields that mould the brain's neural network. By this means, the memes that comprise our culture are hard-wired into our brains, an outlook on reality that, taken to its logical conclusion, means that people can only think about ideas that are present in the meme structure of their culture. Until the release of this book, the meme of remote viewing and psi-warfare could be resisted by the PDF and its meme structure, which upholds the world view. Ludicrous New Age rubbish, which has no scientific grounding, is the key meme used by sceptics to define reality to fit their cosy set of paradigms. As long as the paranormal is couched in inane New Age language, the world of psi can be written off as a bogus world of charlatanism. Unfortunately for the sceptics, the superpowers have a vast amount of scientific research that shows that remote viewing and psi-warfare work. With a scientific model of remote viewing and psi, the entire meme structure of the mechanistic world becomes infected with a new scientific model that connects psi with the old world view — the worst nightmare of the sceptics. It is even more horrible for the UK establishment, which has kept this knowledge secret since the Second World War and represses any disclosure of the scientific basis of psi-warfare, while secretly developing its own remote viewers and remote influencers.
