

$\nabla \vec{R} \approx \vec{R} \otimes \vec{R}$  ID ASSISTED THOUGHTS  
 $\nabla \vec{R} + \vec{R}$  Probability + Intention

$\nabla \vec{R} \rightarrow \dots \times \times \times \times$

IDs do many things for me.

$\nabla \vec{R} \approx \vec{R} \otimes \vec{R}$   $\nabla \vec{R}$

They are a tool for thought. They help.

(A chance - the bell curve  $\nabla \vec{R}$  probability)

$\rightarrow \vec{R} \otimes \vec{R} \otimes \vec{R} \dots$

How would one represent something becoming more and more probable?

( $\rightarrow$ ) 

$\nabla \vec{R} \otimes \vec{R} \rightarrow \dots$

Does it make good sense to think of the thing, the event, as crossing a limen, of making contact with something, a different realm?

$\vec{R}$  - the realm of certainty or being?

$\nabla \vec{R} \otimes \vec{R} \rightarrow \dots$

Maybe probability is something ghost-like that precedes and accompanies being, but both are parts of reality? Is an intention a probability?

It could well be considered so.

$\nabla \vec{R} \otimes \vec{R}$

Is there an attractor involved?

$\nabla \vec{R} \otimes \vec{R} \rightarrow \dots$

With intention we project ourselves and set up attractors.

$\nabla \vec{R} \otimes \vec{R} \rightarrow \dots$

What else is there to project but particles of ourselves, particles of identity?

$\nabla \vec{R} \otimes \vec{R} \rightarrow \dots$

By intending we self-create + self-extend.

$\nabla \vec{R} \otimes \vec{R} \rightarrow \dots$

I much, much prefer writing in my IDs to ordinary writing!
