IDESE IS A METALANGUAGE

4/9/19 [illegible] meta- [illegible].

As I thought this true thought about this strange activity of mine I also came up with a new id for "meta" — [illegible].

[illegible] It is a variant of "beyond" and carries the sense of "above". It is dependent on, one could say parasitic of, "beyond", and forms a semantic pair or conceptual constellation.

[illegible] "dislike" ("like") [illegible].

^ is usually "dislike" but in this case it is a reorientation of the ˇ of ˇˇ.

[illegible]? [illegible]? [illegible] ① [illegible] → [illegible] → [illegible] →.

What is "meta"? What does it mean? It is a language about language, "above" in the sense that it does something more, adds a new dimension, that allows one to be critical in a new way, and creative in a new way and understanding — conscious — in a new way.

[illegible] Then, too, it is applicable to other languages. I have most enthusiasm for applying it to Japanese and will make some posts about that soon.

[illegible] I coined the word "idese" (イディース) above using "ese" as an ending meaning "language" for all languages, ≈ 語 ("go") in Japanese.

[illegible] "-ology" → "ics" ↔ "y". Similarly I use [illegible] (area of knowledge — as a designator for all subjects — usually "-ology" but sometimes "-ics" or "-y".

[illegible]: [illegible] physics [illegible] biology [illegible] botany [illegible] psychology, etc. — [illegible]. -ideographic Gleichschaltung (標準化 standardization)
