

Orders of Magnitude, If/Then Again

[s · Y] , > / < m

I just wrote this and was pleased at how well "orda" works here, in the same id family as "ro", which looks like a step of a stairway.

Y big (! little) · Y magna (. Latin dot) I-tude or -ness
 (measure) amount (etymic-mountain) U contain

I sometimes find good reasons for liking ids after the fact, as happened with it + then, from symbolic logic. I tried to think of better ids that would represent the idea more meaningfully. But some thought I decided that these are good. With if we accept something for consideration in the arena of thought. Since I assume motion from left to right, this makes sense, > or U representing reception + acceptance, + similarly < then, can show exit from arena of thought as a product. Maybe this only makes sense to me in my imagination, but that is okay.

postulate & a pushpin post + note

base (basis) beginning/end

I am happy with the richness of this id. I think I'll keep it. Posting something as a basis at the beginning.
